Imprivata Mobile Device Access and Zebra Identity Guardian

Integrated authentication and intelligent shared device visibility

Authenticate first, see every shared device session

Imprivata Mobile Device Access (MDA) helps organizations simplify shared device workflows with fast, secure, badge-tap access, single sign-on into mobile applications, and secure device handoffs between users. When MDA integrates with Zebra Identity Guardian, organizations can secure their Zebra mobile devices and gather information on the users, devices, and session context. This provides comprehensive visibility into device usage and associated users, including device sign-ons, sign-outs, and operational status.

Reduce anonymous device use

Tie shared device activity to authenticated users instead of relying on shared credentials, manual checkout, or after-the-fact investigation.

Improve security posture

MDA controls access to the device and applications, helping reduce password workarounds while keeping authentication simple for workers to help enforce consistent access policies.

Increase asset visibility

Identity Guardian gives IT a dashboard view of device usage, associated users, sign-on/sign-out activity, status, check-in, battery, and recovery context. As a result, IT teams can investigate events with less ambiguity and understand device and application utilization.

Secure device access turns into accountable asset visibility

Enabling strong security and accountability through the full lifecycle

This integration provides user authentication and usage intelligence, with MDA providing a secure user experience and application access path, while Zebra Identity Guardian provides context for operational accountability.

Lifecycle area	Imprivata Mobile Device Access	Zebra Identity Guardian
User access	Presents the access screen, prompts for badge, face, PIN, password or other enabled factors.	Receives the resulting user/device association for dashboard reporting.
Device authentication	Sets up authentication into the Zebra device and controls the user session lifecycle.	Tracks which user is associated with the device session and when session activity occurs.
Application authentication	Acts as the application authenticator/SSO broker for configured mobile apps.	Correlates device usage visibility to the user and device context produced by MDA.
Shared device handoff	Supports user switch, logout, and credential/session cleanup patterns for shared use.	Shows checked-out user, last user, and sign-on/sign-out events for accountability.
Fleet operations	Reduces repeated manual credential entry while enforcing access policy.	Helps IT and operations see status, connection, battery, charging, location, and recent check-in data.

Together, Imprivata Mobile Device Access and Zebra Identity Guardian connect simple secure access with asset accountability. IT teams gain a clear view of who used each shared device, when it was used, and whether the asset is ready, missing, or at risk — helping to reduce anonymous use, accelerate investigations, improve recovery, and strengthen governance without adding frontline friction.

imprivata®

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organizations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
