Secure shared device access from mobile to workstation

Imprivata Mobile Device Access with Zebra Workstation Connect

Give frontline teams fast, identity-aware access to shared Zebra Android devices. Imprivata Mobile Device Access (MDA) secures device and application access, while Zebra Workstation Connect allows a compatible mobile computer or tablet to serve as an on-demand Android workstation. The result is one managed endpoint that can move from handheld tasks to large-screen work without introducing a separate desktop for every workflow.

Increasing mobile productivity

- **A faster start –** Employees can get to their work with less time spent entering passwords or repeating sign-in steps
- **One device for more of the workday –** A Zebra device can support mobile tasks and then connect to a larger screen for work that benefits from more space
- **A better shared device experience –** Each user can begin with a more personal, consistent experience and return the device ready for the next person
- **More confidence in every handoff –** Organizations can create a clearer sign-in and sign-out experience for devices that move between users and shifts
- **Greater value from existing investments –** The combination can expand how and where Zebra devices are used without requiring a separate device for every type of task

A simpler shared device experience

From start to finish, the teaming of Imprivata MDA and Zebra Workstation Connect helps employees utilize shared mobile devices without causing friction from repeated logins, and trying to go from mobile to workstations.

Access: Simplify sign-in
Use MDA's supported badge-tap or facial authentication to unlock a shared device. SSO and Autofill reduce repeated credential entry into supported applications.

Flexibility: Match the mode to the task
With Zebra Workstation Connect, work in handheld mode, then dock in a compatible Connect Cradle or connect wirelessly through ZEC500 to use a monitor, keyboard, mouse, headphones, and other peripherals.

Handoff: Reset for the next user
MDA lets users lock the device between use, switch users quickly, sign out supported apps, clear credentials, and retain activity visibility so the next session starts clean.

One identity model across two work modes

MDA governs who is using the device and how the session starts and ends. Workstation Connect changes how the device is used – without changing the endpoint.

- **Extend your Zebra strategy –** Use the devices you already trust across a broader range of workflows and locations
- **Support more flexible work –** Let users move between mobile and desk-based activities without changing devices or starting over
- **Reduce everyday friction –** A simpler access experience can help employees spend less time on technology and more time serving patients, customers, or colleagues
- **Encourage adoption –** When using shared devices feels easier and more predictable, employees are more likely to rely on them throughout the day
- **Create a consistent approach –** Bring a common sign-in, handoff, and access experience to shared Zebra devices across teams and sites

Epic workflow highlight

For organizations using Epic, the integration can support a smoother experience across mobile and larger-screen workflows. Clinicians may use a Zebra device for mobile activities with Epic Rover and then connect it to a larger display for documentation, review, or other work that benefits from more screen space. MDA can help reduce repeated sign-in steps and support a more consistent transition between users, giving employees a simpler, more flexible way to use shared Zebra devices throughout the day. Epic is a registered trademark of Epic Systems Corporation.

Combined workflow value

Imprivata Mobile Device Access and Zebra Workstation Connect bring together easier shared device access, flexible mobile and larger-screen work, and more consistent handoffs between users. For organizations with Zebra devices, the integration can help improve the employee experience, increase device utilization, and extend the value of existing technology investments across a wider range of workflows.

imprivata®

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organizations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
