

MAXIMIZE YOUR ONESIGN INVESTMENT

Training and Certification

Imprivata OneSign® Training and Certification courses help maximize your OneSign investment. These courses provide students with the knowledge they need to get the most benefit from Imprivata's solutions and to ensure a rapid and effective deployment strategy. Training includes:

- Lecture-based training
- Instructor demonstrations
- Participant guide
- Hands-on exercises
- Quizzes and tests for certification

By participating in a session students can:

- React with confidence to changes in your application environment
- Improve ability to manage OneSign after installation with minimal service expenses
- Be introduced to new product features that will benefit your organization

IMPRIVATA ONESIGN TRAINING AND CERTIFICATION OFFERINGS

Imprivata Administrator Certification

This course is appropriate for helpdesk team members who will be supporting OneSign, as well as administrators who will be responsible for managing OneSign users at your company. This is a two-day course delivered at an Imprivata training facility that covers:

- User Importing and Management
- Authentication Methods
- Reporting and Alerting
- Intro to Application Profiling

Imprivata Engineer Certification

This training is our comprehensive course for the individual who will both be managing the OneSign appliance and profiling applications. Students are trained both to install and deploy OneSign, as well as manage the appliance and users after a rollout. This is ideal training for the student who will be responsible for future rollouts of OneSign to new departments as part of a phased installation. Upon successful completion of the course, the student will be certified as an Imprivata Certified Engineer (ICE). The training includes several hands-on workshops and demos. Students are provided with best practice examples based on hundreds of customer deployment experiences. This is a four-day course and has an optional 5th day for students to take the certification exams at Imprivata. Specifically, students will gain exposure to:

- User Importing and Management
- Authentication Methods and Policies
- Reporting and Alerting
- Application Profiling Concepts
- Testing and Troubleshooting Application Profiles
- Deployment Strategies for Application Profiles
- Advanced Application Techniques

Post the on-site training segment, students must complete a OneSign certification test within 2 weeks of the original classroom training to receive official certification.
