

FAST AND SECURE ONE TOUCH LOGIN TO PATIENT INFORMATION

ACCESS TO PATIENT DATA IS TIME CONSUMING AND FRUSTRATING

In today's dynamic healthcare environment, time is critical to improving patient outcomes. To ensure the greatest quality of care, clinicians need fast access to patient health information from multiple points of care. However, patient health information is not easily accessible—clinicians need access to multiple applications at different workstations, which requires constant entry and re-entry of their sign-on credentials—a frustrating process that is disruptive to their workflow and takes significant time away from their primary task of caregiving.

ONESIGN FASTPASS™ - FAST AND SECURE ONE TOUCH LOGIN TO PATIENT INFORMATION AT ANY WORKSTATION

OneSign FastPass technology eliminates clinician access challenges by providing fast and secure access to workstations with the simple touch of a user's fingerprint or their proximity card ID badge—no more typing! Users now have the unprecedented ability to seamlessly move among different points of care and quickly gain secure access to patient information without the burden of typical access issues.

OneSign FastPass allows users to quickly and securely log on to different workstations simply by touching their finger or ID badge on a reader without having to type their

Windows username and password everytime they log on. OneSign FastPass offers two options to support the following user authentication scenarios:

- **FastPass for Proximity Cards:** Users perform a secure, two-part authentication at the beginning of their work shift by touching their ID badge on a reader and entering an easy to remember PIN or password as a second identification factor. From that point on, FastPass starts an authentication 'grace period' during which users need only to touch their card on the reader to access any shared workstation.
- **FastPass for Finger Biometrics:** Users touch their finger to a biometric reader to positively identify and authenticate to the workstation. OneSign's patented fingerprint technology is the only available solution to identify and authenticate a user in a single, easy step—typing a user name and password is no longer required.

BENEFITS

- Speed of access to workstations and patient data from any workstation
- Improves clinician workflows and increases user satisfaction and productivity
- Painless security – One touch is all that is required to secure access to the workstation

IMPRIVATA ONESIGN - THE PLATFORM FOR EMPLOYEE ACCESS MANAGEMENT

OneSign FastPass is an integrated component of Imprivata's OneSign Authentication Management. OneSign Authentication Management replaces weak Windows desktops and remote VPN passwords with a broad range of strong authentication options—including finger biometrics, proximity cards, smart cards, many national and government ID cards, One-Time-Password tokens, and an employee's physical location, to enable centralized and flexible authentication management at the desktop, network, application, and transaction-level.

OneSign Authentication Management is a module of the OneSign Platform. The OneSign Platform converges authentication and access management, seamlessly integrating strong authentication, application single sign-on, user provisioning, physical access control systems, and event reporting, to enable centralized access policies that enforce every aspect of access across all users, rights, locations, and conditions.

Managed from a single, easy-to-use Web-based administrative console, the Imprivata OneSign platform is delivered in a purpose-built, highly secure and self-contained hardened appliance. Non-invasive to your organization's existing IT infrastructure, OneSign requires no change to user directories, applications, or physical access control systems, and it does not require additional staffing or specialized management skills.

Designed for flexible and rapid enterprise deployment and easy integration, Imprivata OneSign's appliance-based solution dramatically minimizes implementation time, infrastructure needs, and installation costs—accelerating your return on investment and lowering your ongoing support costs.

Bringing secure employee access management to companies around the world from our offices in:
