

DATASHEET

Imprivata Identity Governance and Workday

Detect identity lifecycle changes, govern access, increase productivity, and automatically onboard employees in minutes

The integration of Imprivata Identity Governance and Workday automates and streamlines the interaction between the IT and HR departments to simplify provisioning, de-provisioning, and adjusting access based on the role and profile of an identity. The integration enables both departments to detect employee identity lifecycle changes as they happen, rather than waiting for periodic reconciliations.

The challenge

When identities are managed in silos – either with IT or HR – both efficiency and security are impacted. Further complicating the process is the manual onboarding, provisioning, de-provisioning, and lifecycle management of users. Coupled with the complexity of multiple cloud applications, hybrid environments, and the rise of bring-your-own-device (BYOD), it has become increasingly important to ensure secure access to applications and data.

All told, it's now more important than ever to prioritize compliance and risk management and control exactly who has access to what, and when. But manual processes are risky, rely on stellar inter-team communication, and often result in hours, if not days, of lost productivity.

With Imprivata Identity Governance and Workday, there's a better way: automated interactions between HR and IT, simplifying employee lifecycle access changes.

End-to-end automated multi-job support for every identity lifecycle change

The next-level integration of Imprivata Identity Governance and Workday provides a cutting-edge, first-of-its-kind solution for managing identities holding one or more jobs within the organization and adjusting access based on the roles and profile of the jobs as they start, transfer, finish, or take on additional jobs. The integration detects changes as they happen, rather than waiting for daily reconciliations, for even tighter security.

Benefits

- **Achieve compliance** | Automatically adjust access and detect identity lifecycle management changes
- **Real-time synchronization** | Integrate systems between IT and HR to manage the lifecycle of identities is critical to the organization's security
- **Access** | Remove a privileged user's administrative access in Active Directory and all other systems after termination in Workday
- **Automation** | Automate identity workflows for the joiners, movers, and leavers, and automate day one onboarding and provisioning
- **Streamline workflows** | HR creates a new employee in Workday and Imprivata Identity Governance immediately creates a new identity to then provision access based on their role and profile
- **Remove manual workflows** | No need to wait for the IT department to provide access or make manual requests
- **Certification and testing** | Imprivata will continue to test and validate new releases of Workday before the customer takes them, finding any issues before they upgrade

Imprivata Identity Governance provides a policy-based approach to simplify and accelerate secure role-based and least privileged access to systems and applications. The solution streamlines the entire user lifecycle, improves auditing processes, and delivers on-demand analytics for faster threat evaluation and remediation.

With Imprivata, you gain a strategic partner and a technical expert. Contact us for more information.

Imprivata, the digital identity company for healthcare, provides identity, authentication, and access management solutions that are purpose-built to solve healthcare's unique workflow, security, and compliance challenges.
