

Minimize downtime without compromising security

A vendor privileged access management solution for manufacturing

Leading priorities in manufacturing: Downtime and supply chain security

THE CHALLENGE:

Managing and securing access for vendors that need to deliver fast support to essential production floor equipment.

THE SOLUTION:

A vendor privileged access management platform designed to provide vendors with secure remote access to OT networks and equipment at plant locations worldwide.

Top 5 capabilities of an effective secure remote access platform for vendors in manufacturing:

Immediate access

Fast and secure remote access is critical for equipment availability. Vendor support technicians need to connect resolve issues as soon as possible to resume production.

Manufacturing companies experience up to **800** hours of unplanned downtime per year

Remote access is critical to uptime; **60-70%** of machine problems require a simple fix, which can be done remotely

Granular access controls

Restrict vendor access to only the applications they truly need, when they need it. Enforce least privileged access policies

of third-party data breaches are a result of too much privileged access

cite lack of centralized vendor access control as a security challenge

Secure authentication and identity management

Multifactor authentication is key to ensuring each user proves their identity before accessing OT equipment. IT staff want to spend less time setting up every new vendor, and want have a standardized way to easily provision and deprovision individual vendor users and access.

Multifactor authentication can block over **99.9%** of account compromise attacks

Just **47%** of manufacturers say they have a comprehensive inventory of all third parties with access to their network

Session monitoring

Organizations need visibility into when and what their vendors are doing.

of organizations know the type of network access that their third parties have

of organizations believe they are effective in mitigating third-party remote access risks

of organizations are effective in preventing third parties from sharing credentials

Track every vendor user's activity

Video recordings of activity | Detailed audit logs | Credentials utilized

Standardization of connectivity

Manufacturers need a centralized, standardized and enterprise-grade remote access solution that supports vendor's connectivity requirements and enables local resources to manage access.

49% of network intrusions involve compromised credentials in manufacturing

VPNS are the **third-most** used attack vector in manufacturing

The vendor access solution for manufacturing: Imprivata Vendor Privileged Access Management

We understand that your priorities are security and uptime. Our secure vendor access platform delivers the access your vendors need to support your OT equipment and IIoT devices while implementing cybersecurity best practices that protect your organization.

Third-party identity management
Identity and employment verification for every user

Credential management
Identity and employment verification for every user

Comprehensive audit
Granular visibility into all user and application activity

Access controls
Least privileged, Zero Trust access for IT and OT networks

Learn more about how Imprivata Vendor Privileged Access Management can help your organization secure vendor access without impacting uptime and minimize your third-party security risks.
