Imprivata Confirm ID for Clinical Workflows

Fast, convenient authentication for clinical workflows

Key benefits:

- Increases provider efficiency by replacing passwords with innovative and convenient authentication methods

- Integrates seamlessly with leading EHRs and other applications to enable fast, secure clinical authentication workflows

- Improves compliance and auditing with increased visibility into user interactions with patient health information

Imprivata Confirm ID for Clinical Workflows improves security and compliance by enabling fast, secure authentication for clinical workflows.

To deliver safe, effective, and compliant patient care, clinicians are often required to authenticate clinical transactions such as medication ordering, witnessing medication wasting, electronic prescribing, and blood administration, among others. However, adding a layer of security introduces potential inefficiencies that can frustrate clinicians and impede patient care.

Imprivata Confirm ID for Clinical Workflows transforms clinical authentication workflows by replacing passwords with fast, convenient methods such as the tap of a proximity badge or swipe of a fingerprint. The solution also integrates with leading EHRs and other clinical applications to give clinicians a seamless, authentication experience and create a robust audit trail for all transactions with patient health information.

With Imprivata Confirm ID for Clinical Workflows, organisations can improve security and compliance while increasing provider satisfaction and allowing more time for patient care.

"My peers and I have relied on Imprivata's comprehensive single-sign on platform to eliminate the cumbersome manual entry of usernames and passwords when accessing systems and patient records. We are encouraged to extend this fast, automated authentication to other interactive clinical workflows, which allows us to enforce necessary security policies while maintaining clinical workflow efficiency."

- Ian Arbuthnot, Director of IM&T, Western Sussex Hospitals NHS Trust

Seamless integration with leading EHRs and clinical applications

Imprivata Confirm ID for Clinical Authentication offers productised API-level integration with the leading EHR and other clinical applications. This tight integration streamlines clinical authentication workflows by making it easy and convenient for clinicians to re-authentication within their existing workflows. A single instance of Imprivata Confirm ID for Clinical Workflows will work across the ecosystem of EHRs and clinical applications, giving clinicians a consistent experience while reducing the total cost of IT ownership.

Fastest, most convenient authentication

Imprivata Confirm ID for Clinical Workflows offers a broad range of convenient and innovative authentication options to best meet various clinical workflow requirements. Clinicians are only prompted for authentication methods that are available and allowed, which streamlines in-process authentication and improves efficiency. Some of the supported authentication options include:

- **Proximity cards** that enable authentication with the simple tap of a badge

- **Fingerprint biometrics**

- Conventional **one-time-password (OTP) tokens**

Comprehensive auditing and reporting

Imprivata Confirm ID for Clinical Workflows offers detailed reporting capabilities to establish a secure, auditable chain of trust for clinical authentication workflows. Imprivata Confirm ID gives organisations better visibility into how, when, and where clinicians interact with patient health information to meet compliance requirements. Comprehensive reporting tools document the credential enrollment process and user authentication, storing the data in a centralised location for simplified compliance reporting.
