

Imprivata Confirm ID for Medical Devices

Streamline access to Capsule's SmartLinX Neuron 2 mobile clinical computer

Key benefits:

- Streamline access with fast, convenient authentication
- Increase workflow efficiency by replacing usernames and passwords with fast, automated authentication through the tap of a proximity badge
- Allow the implementation of SmartLinX in hospital areas requiring frequent authentication (such as ED triage)

Imprivata Confirm ID™ enables fast, secure user authentication for accessing the Capsule SmartLinX Neuron™ 2 mobile clinical computer and transacting with patient information. This capability optimises how organisations leverage Capsule's SmartLinX Medical Device Integration System™ (MDIS) to capture, harness, and unlock the power of patient data from all medical devices throughout the healthcare enterprise.

Capsule's SmartLinX Neuron 2 solutions

Capsule offers several solutions that run on its Neuron 2 device, including:

- SmartLinX Chart Xpress™, which delivers connectivity for existing low acuity monitors and features bedside charting capabilities that improve the timeliness and accuracy of data in the EHR.
- SmartLinX Vitals Plus™ is an innovative patient monitoring system that uniquely integrates vital signs monitoring, clinical documentation and connectivity into a single device.

Fast, convenient authentication

To increase security and safeguard patient information, the Neuron 2 requires user authentication to access the SmartLinX applications.

To streamline this workflow, Imprivata Confirm ID integrates with the Neuron 2 to enable fast, convenient authentication through the simple tap of a proximity badge. This can either replace manual entry of username and password to increase efficiency, or for added security, organisations can set policies to require two-factor authentication to access the Neuron 2 device.

By enabling care providers to quickly and conveniently authenticate when accessing Neuron 2 devices and SmartLinX applications, Imprivata Confirm ID improves efficiency, increases clinician satisfaction, and allows for more time to be spent on patient care, all while meeting security and regulatory compliance requirements.
