Imprivata PatientSecure certification program

Maximum participants: Up to five participants.

Audience: IT Project Owner, EHR Administrator, HL7 Administration, Database Administrator, Patient Administrator.

Required pre-work: None

Format: Instructor-led training.

Length: 2 days

Overview

This two-day instructor-led program provides participants with the knowledge administrators need to make educated choices about how to configure Imprivata PatientSecure, ranging from understanding the architecture to roles and responsibilities.

Topics consist of maintenance and usage of the system; as well as profiling and deploying applications. Topics include reporting on system functionality and registrar metric utilization, i.e., authentication and enrollment.

Attendees who successfully complete all course requirements including passing the certification exam will earn Imprivata PatientSecure Certified Administrator status valid for one year.

This program is an essential first step toward preparing your team for their hands-on roles and is a requirement for customers planning to perform their own upgrades.
