Imprivata Confirm ID

Key Benefits

- Centralize identity and multifactor authentication across all enterprise workflows, including:
  - Remote access
  - Cloud applications
  - EPCS
  - Medical devices
  - Clinical workflows such as medication ordering, witness signing, and others

- Make security invisible to end users by replacing passwords with innovative, convenient, and DEA-compliant authentication methods, including:
  - Hands Free Authentication
  - Push token notification
  - Fingerprint biometrics

- Improve security and compliance by creating a secure, auditable chain of trust for all workflows

Imprivata Confirm ID™ is the comprehensive identity and multifactor authentication platform for fast, secure authentication workflows across the healthcare enterprise. Imprivata Confirm ID is a single, centralized solution that enables remote and on-premise users to transact with patient health information securely and conveniently.

The need for holistic, enterprise-wide multifactor authentication in healthcare has never been greater, and Imprivata Confirm ID provides a secure, auditable chain of trust wherever, whenever, and however users interact with patient records and other sensitive data.

Imprivata Confirm ID combines security with convenience by offering a broad range of innovative and convenient authentication methods – including Hands Free Authentication, push token notification, and fingerprint biometrics. This makes security invisible while giving users the flexibility to leverage the authentication methods that best meet their workflow needs.

Imprivata Confirm ID delivers a single, robust solution for secure, multifactor authentication across healthcare workflows, including:

Electronic prescribing of controlled substances (EPCS)

Imprivata Confirm ID for EPCS is the most comprehensive platform for provider identity proofing, supervised enrollment of credentials, two-factor authentication, and auditing and reporting to help healthcare organizations meet the DEA requirements for EPCS. Imprivata Confirm ID for EPCS also integrates with leading EHRs and e-prescribing applications, and supports the most complete set of innovative, convenient, and DEA-compliant two-factor authentication methods such as Hands Free Authentication, push token notification, and fingerprint biometrics, to give providers a fast and efficient EPCS workflow.

Remote access & cloud applications

Imprivata Confirm ID for Remote Access is the secure and convenient two-factor authentication solution purpose-built to meet the critical security and workflow challenges of today's healthcare enterprise. The solution improves security by enabling two-factor authentication for remote network access, cloud applications, and other critical systems and workflows.

Imprivata Confirm ID for Remote Access offers the same convenient authentication methods – including push token notification – that can be leveraged across workflows, allowing organizations to add a layer of security that is familiar, fast, and efficient for users.

Clinical workflows

Imprivata Confirm ID for Clinical Workflows improves security and regulatory compliance by enabling fast, secure authentication for clinical workflows such as computerized physician order entry (CPOE), medication ordering, witnessing medication wasting, blood administration, and others. Imprivata Confirm ID for Clinical Workflows transforms these workflows by replacing passwords with fast, convenient authentication with the tap of a proximity badge, swipe of a fingerprint, or Hands Free Authentication. Imprivata Confirm ID for Clinical Workflows also integrates with leading EHRs to create a seamless, in-process authentication experience for care providers while creating a robust audit trail for all transactions with patient health information.

Medical devices

Imprivata Medical Device Access enables fast, secure authentication to medical devices, such as those used to capture and facilitate the electronic exchange of vital patient information to a patient's medical record. For medical devices already requiring user authentication, Imprivata Medical Device Acces improves efficiency by replacing the cumbersome manual entry of usernames and passwords with fast, automated authentication through the simple tap of a badge. And for organizations seeking to bolster security and improve auditability by enforcing authentication for medical device access, Imprivata Confirm Medical Device Access ensures minimal disruption to patient care through fast, convenient authentication.

> **A single, centralized authentication management platform improves security and compliance auditing across the enterprise by enabling better control over how, when, and where users interact with patient records and other sensitive information. At the same time, giving users fast, convenient authentication options ensures no disruption to workflows and gives providers more time to focus on patient care.**

Fastest, most convenient multifactor authentication

Imprivata Confirm ID delivers sophisticated authentication from any device, anywhere, and allows all enterprise users to enable holistic user authentication inside and outside of the hospital. Imprivata Confirm ID offers a broad range of convenient and innovative authentication options to best meet various workflow requirements. Users are only prompted for the authentication methods that are available and allowed, which streamlines authentication and improves efficiency. Supported authentication methods include:

Workflow	Supported authentication methods							
	Hands Free Authentication	Push token	Fingerprint	Soft token	Hard token	Badge	Password	SMS
Remote access & cloud applications		✓		✓	✓		✓	✓
EPCS	✓	✓	✓	✓	✓		✓	
Clinical workflows	✓	✓	✓	✓	✓	✓	✓	
Medical devices			✓			✓	✓	

By giving organizations a single, robust platform for enterprise-wide identity and authentication management, Imprivata Confirm ID eliminates the need for multiple authentication solutions for various workflows. Imprivata Confirm ID improves efficiency and satisfaction for users and streamlines authentication management and security policy enforcement for IT.
