

# Imprivata Privileged Access Management Implementation Services

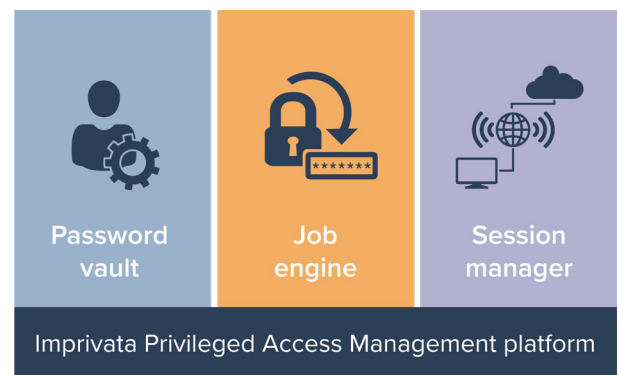

Privileged accounts pose an even greater security risk than the average end user account because of their greater level of access – in fact, 80% of breaches involve privileged credentials. With Imprivata Privileged Access Management, you can address these threats and prevent negative audit findings, while minimizing the cost of cybersecurity insurance.

Imprivata Privileged Access Management combines privileged account management, session management with recording, job management, automated password resets, a secure enterprise password vault, and integrated standards-based multifactor authentication via Imprivata OneSign® and Imprivata Confirm ID® to deliver a comprehensive, enterprise privileged access management (PAM) solution.

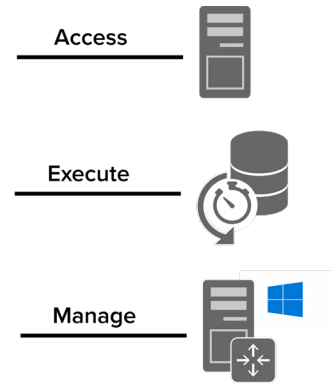

To help you get up-and-running with Imprivata Privileged Access Management as quickly as possible, Imprivata offers a fast start implementation program. The Imprivata Professional Services team will help you configure and deploy the solution – including integrating with Imprivata OneSign, to enable single sign-on, and Imprivata Confirm ID, to enable multifactor authentication – to help you start realizing the benefits of your PAM solution quickly and cost-effectively. This will ease any frustration or concern about how to get started when implementing Imprivata Privileged Access Management at your organization.

The Imprivata Privileged Access Management Implementation Services package includes:

- Installation of Imprivata Privileged Access Management in a High Availability Configuration (either Windows or Linux)
- Integration with your Active Directory
- Configuration of a network share to store session recordings
- Enablement of Imprivata OneSign for single sign-on to access the Imprivata Privileged Access Management admin console
- Configuration of Imprivata Confirm ID to enable multifactor authentication using the Imprivata ID mobile app

- Configuration for up to 5 privileged assets including two workflows
- Configuration of a Test Environment
- Provide an overview of reports included with Imprivata Privileged Access Management
- Configuration of Password Rotation for a local or domain admin account

Imprivata, the digital identity company for healthcare, provides identity, authentication, and access management solutions that are purpose-built to solve healthcare's unique workflow, security, and compliance challenges.
