

# Healthcare CIOs: How the IT resource gap puts you at risk – and what you can do about it

Due to rapid technological advances, a competitive labor market, and a limited talent pool, **76% of global IT decision-makers** face serious resource gaps. And nearly **40% of healthcare IT decision-makers** say their organization is at greater risk of security breaches due to lack of cybersecurity expertise.

To bridge this resource gap, **more healthcare CIOs**, CISOs, and other IT leaders are engaging managed service providers (MSPs) to help boost security and increase focus on mission-critical projects to meet their strategic operational and technological goals.

You can too. Ensure your team's success by shifting workload, stress, and risk to an experienced MSP partner. Here's how:

## Today's resource constraint challenge

### A lack of resources impedes strategic projects

Routine system administration hinders mission-critical projects like digital transformation, clinical workflows, and cybersecurity.

### Technology outpaces available IT security talent

It's increasingly difficult to find the skilled pros we need to strengthen security with **identity access management (IAM)** solutions.

### Complicated workflows add to burnout/attrition

Stressed frontline workers wrestle with complex clinical workflows – further complicated by **remote** work, mobile, and telehealth protocols.

### We need help maximizing our IAM investments

My team is stretched too thin with M&A activity, system and software updates, and technology demands to get the most value from IAM.

## Tomorrow's managed services solution

### Extend the power of your team with an MSP

By assigning routine tasks to a proven MSP partner, your team becomes free to focus on your most important strategic initiatives.

### Rely on IT pros with years of IAM experience

Engage specialized MSP teams with proven experience implementing leading IAM solutions to repel attacks and secure patient data.

### Tap MSP specialists to streamline workflows

Cut time-consuming activities with **authentication solutions** for fast, secure, system and **mobile** device access – implemented by your MSP.

### Choose a proven MSP for more value, less risk

Select a partner that can deliver the most positive technological and business outcomes – with 24-hour global support and professional service.

## Extend the power of your team: Let a healthcare-focused MSP bridge the IT resource gap

Why go it alone when your organization's success is on the line – and progress is being blocked by market forces beyond your control? Now's the time to extend the power of your IT team.

By partnering with a **healthcare-focused MSP**, you can strengthen cybersecurity defenses and keep your most critical digital transformation projects on track – all while improving clinical workflows, ensuring patient privacy and safety, managing compliance, and more.

Extend the power of your IT team with Imprivata Managed Services
