

Imprivata Privileged Access Management integration with Imprivata OneSign

Authenticate, simplify, and control privileged access.

The integration of Imprivata Privileged Access Management and Imprivata OneSign® simplifies access and improves administrator productivity by allowing organizations to ensure that only authorized privileged users can access their accounts. The integration of these solutions significantly reduces an enterprise's attack surface, while improving visibility and accountability for its users. Organizations utilizing both products deliver secure access and authentication to privileged accounts with a seamless automatic login via SAML into Imprivata Privileged Access Management when using Imprivata OneSign.

Password security plays a fundamental role in Identity and Access Management (IAM). A comprehensive IAM strategy is a layered approach that combines SSO, PAM and a password manager with 2FA, and other security measures, such as monitoring end user behavior for unusual login activity.

Integrated solution benefits

Improve security | Record, and audit privileged access sessions, commands, and actions. Centrally collect, securely store, and index account access, keystroke logs, session recording, and other privileged events. Users requesting access to privileged accounts and systems are properly authenticated and authorized through adaptive multifactor authentication.

Workflow automation | Users can select "OneSign Login" from the Imprivata Privileged Access Management admin console. Imprivata OneSign bypasses manual entry of credentials and adds a layer of security controls with multifactor authentication.

Improve efficiency | Centralize authentication to Imprivata Privileged Access Management through Imprivata OneSign to simplify access and improve administrator productivity.

Imprivata solves complex workflow, security, and compliance challenges for mission- and life-critical industries with the industry's only platform to fully manage and secure all enterprise and third-party identities. The Imprivata digital identity platform delivers identity governance, multifactor authentication, enterprise singles sign-on, privileged access management, vendor access management, mobile device provisioning, and access, and risk analytics intelligence. This comprehensive, end-to-end identity and access management ensures all users have secure but seamless access to the applications and information they need, anytime and anywhere they need it, from any device and location.

With Imprivata, you gain a partner, not just a technology vendor. Request a demonstration.

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
