

DATASHEET

Advancing your Imprivata Customer Privileged Access Management (formerly SecureLink Customer Connect) solution to the cloud

Ensure robust, secure remote access to your customers without the infrastructure management or additional overhead

In today's business environment, many organizations are advancing their IT strategy to cloud-first or even cloud-only. In fact, by 2025, Gartner predicts that 55% of large organizations will implement a cloud-only strategy.

Why? Simply put, on-premise software is more expensive to implement and maintain. In comparison, the streamlined operations – as well as the reduction in infrastructure and overhead management that cloud provides – results in time and cost savings for the IT team, which can then be focused on more strategic areas.

The benefits of moving your Imprivata Customer Privileged Access Management solution to the cloud include:

Eliminating administrative burden, as we handle infrastructure management, ongoing appliance management, patches, monitoring, and upgrades.

Gaining faster, simpler access to the features and functionality of new releases, with minimal downtime.

Ensuring infrastructure reliability through the built-in redundancy of AWS, which helps ensure uptime and eliminates the need for complex on-premises deployments.

Reducing your total cost of ownership by transferring the infrastructure and appliance management to our team, which saves time and hard costs while enabling you to maintain the **exact same** solution functionality.
