

DATASHEET

Reducing risk, protecting patients

Patient privacy monitoring with
Patient Privacy Intelligence (formerly
FairWarning)

Imprivata Patient Privacy Intelligence (formerly FairWarning) helps you meet compliance standards through managing the full lifecycle of patient access auditing.

Equipped with artificial intelligence, machine learning, and behavioral analytics capabilities, our solution helps healthcare organizations strengthen their compliance posture and meet privacy monitoring goals.

Benefits of Patient Privacy Intelligence (PPI)

EFFICIENT INVESTIGATIONS

A full investigation module with navigation to easily move through the investigation process and highlighting of key documentation areas for investigations to help quickly resolve compliance issues.

REACTIVE AUDITING

Respond to patient complaints quickly with the ability to search on all accesses, get instant awareness into what users are doing at the event level, and see what to focus on with indicators and risk scores.

PROACTIVE AUDITING

Receive alerts on suspicious accesses that need to be reviewed and gather insights for investigations with a full view into each access to review what specific actions were taken in the access log.

ROBUST REPORTING

With over 100+ out-of-the-box reports and the ability to produce custom reports, your organization can quickly compile data that meets compliance standards and helps your organization understand user behavior.

Key Capabilities of PPI

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Utilizing artificial intelligence (AI), and machine learning, PPI allows you to proactively detect high-risk activities. By combining the two processes, the system can identify instances of known and unknown anomaly types.

Focus on what needs to be addressed by allowing the solution to review 99% of the access log, presenting you with the 1% of accesses that are truly suspicious. Those accesses are ranked and analyzed for possible violations with PPI Artificial Intelligence Risk scores and access explanations for fast insight into what accesses need to be prioritized for review.

Explain and Score 99% of events

Identify 1% of anomalies, rank and score

Alert and take action

Utilize alert limits to set daily alert thresholds to ensure focus on the highest risk accesses and machine learning scenarios. Identify new risks, reduce overall risk, and save time to focus on additional aspects of your privacy and compliance program.

INTEGRATIONS

PPI is the only patient privacy monitoring solution that integrates with Imprivata Enterprise Access Management (formerly OneSign) to provide a detailed view of anomalous user activity across applications for a full scope of potential user risk. Combined with PPI's One ID and patented Identity Intelligence technology creates one identity for each user in PPI to easily identify high-risk users and gather insights on consistent issues that could be mitigated.

PRIVACY BY DESIGN

We understand the importance of your patient data and trusting our organization as a business partner. That's why PPI solutions take the proper privacy and security measures to keep your data protected. We only collect necessary data, enforce least privileged access, and implement strict policies for the security of personal data. PPI aligns with frameworks such as ISO 27001 and NIST, and has completed both SOC 2 and ISO 27001 certifications.

OPTIONAL FULLY MANAGED APPLICATION:

Imprivata helps organizations with implementation of Imprivata solutions, informs and guides technical change management and strategic business planning. They act as a supplemental IT resource, providing hands-on support, training, and remote administration. Benefits of Services include increased return on investment, reduced complexity, accelerated time-to-value, reduced cyber risks and threats, boosted efficiency, precision, and end user satisfaction.

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
