

## DATASHEET

# Unified identity security: Driving efficiency of frontline workers while reducing risk

Organizations rely on providing frontline workers with immediate and efficient access to systems and applications to ensure smooth and effective operations. However, in shared device ecosystems—such as those where workers use a shared computer workstation, a shared mobile phone during their shift, or other devices—inefficiencies often arise. Workers may quickly switch between devices or only access a workstation infrequently. Both scenarios create problems: the worker switching quickly wastes a significant amount of time entering passwords, while the worker who rarely accesses a shared device is likely to forget their password, leading to unproductive time while they request a reset.

Imprivata Enterprise Access Management (formerly Imprivata OneSign and Imprivata Confirm ID) and SailPoint Identity Security Cloud are integrated to provide frontline workers with fast, password-less access while managing and securing dynamic access to critical applications and data. IT and Security teams can fully govern access across the enterprise, to help ensure compliance and minimizing risk, while directly provisioning frontline access for frontline workers to shared workstations, mobile devices and appropriate applications.

This combination of industry-leading technologies ensures secure, automated access to critical applications and data without sacrificing efficiency. Together, we can help you empower your workforce, reduce cyber risk, and maintain high compliance standards.

COMING SOON!

## Integration overview

The integration of SailPoint Identity Security Cloud and Imprivata Enterprise Access Management enable organizations to authenticate user access with single sign-on and multifactor authentication, confirm that users have the right access, and ensure that authorization least privilege policies are enforced. Leverage SailPoint and Imprivata's identity security and access management integration to:

- Automatically provision and deprovision users
- Provide unified access governance for joiner, mover, leaver processes
- Deliver passwordless access and multifactor authentication including shared workstations and mobile devices
- Leverage activity-based recommendations for ongoing access requests and role modeling
- Identify unused access licenses through comprehensive user access data logs
- Perform AI-driven certifications and detect risky outliers

## Benefits

- Reduce the amount of time it takes for end users to gain access to crucial applications from weeks to minutes with integrated identity security and access management
- Use one solution to build roles, review access history, and automate the management of current access for all internal and external identities and vendors
- Satisfy audit requests with a unified audit trail of employees' access history and how access has changed over time
- Reduce risk by providing your compliance team with a central location to review and respond to real-time visibility of user access and identity behaviors
- Transform threat detection and response with AI that identifies risks by analyzing access patterns and user behaviors across your organization

### About SailPoint

SailPoint equips the modern enterprise to seamlessly manage and secure access to applications and data through the lens of identity – at speed and scale. As a category leader, we continuously reinvent identity security as the foundation of the secure enterprise. SailPoint delivers a unified, intelligent, extensible platform built to defend against today's dynamic, identity-centric cyber threats while enhancing productivity and efficiency. SailPoint helps many of the world's most complex, sophisticated enterprises create a secure technology ecosystem that fuels business transformation.

### About Imprivata

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enable organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
