Imprivata Mobile Device Access

Shared device management, simplified

Healthcare organizations are implementing mobile solutions to improve care quality and increase operational efficiency; however, the introduction of new mobile technologies creates challenges around security, inventory management, and clinical efficiency.

Ensuring the proper balance of security and efficiency, both from technology and user management standpoints, is critical for the successful adoption of mobility initiatives in healthcare.

With Imprivata Mobile Device Access, organizations can be confident in knowing that devices are left in the proper state, every time. The comprehensive solution enables secure assignment of devices between uses to ensure patient privacy, data integrity, and clinical productivity.

Improved security for shared-use devices

With Imprivata, organizations can lock down devices between use, ensuring that only trusted identities have access to sensitive tools and information.

Additionally, users are fully logged out between each use to ensure a clean state, every time.

Effortless access to devices and applications

Users experience streamlined access to secured devices with the simple tap of a proximity badge. Additionally, utilizing Imprivata single sign-on (SSO) technology, the need for manual authentication into individual applications is removed, saving time and reducing frustration.

Benefits

- Fast, badge-tap access to devices and seamless SSO into mobile applications

- Increased security for shared-use environments

- Auditable visibility into user interactions with devices

- Simplified inventory management and loss prevention

Inventory management and loss prevention

Comprehensive reporting and audit logs bring visibility into user interactions with devices and applications. Accessing and understanding information such as which users accessed devices last, as well as the last known location of a device, not only expedites investigations into lost devices but also leads to increased user accountability.

Shared mobile, simplified

Imprivata Mobile Device Access is healthcare's only authentication solution that enables fast, secure access to Android devices and applications. Users can access shared mobile devices with the simple tap of a proximity badge, and can then SSO into their applications. Imprivata Mobile Device Access helps organizations unlock the full potential of shared mobile devices by ensuring a fast, efficient workflow while improving security and auditability.
