

DATASHEET

Get CMMC 2.0 compliant without slowing down production

Secure, frictionless access management for manufacturing environments with Imprivata Enterprise Access Management (EAM)

Overview

If you're a manufacturer aiming for Department of Defense (DoD) contracts, Cybersecurity Maturity Model Certification (CMMC) 2.0 is a must-have. Even if they're not a requirement for your organization, adhering to their standards will help you maintain a strong cybersecurity posture. But compliance shouldn't come at the cost of productivity.

Imprivata Enterprise Access Management (EAM) is a digital identity access management solution that simplifies secure access and authentication for all your systems, applications, and shared workstations — without disrupting frontline productivity.

Whether you're pursuing Level 2 (Advanced) compliance or securing Controlled Unclassified Information (CUI) in operational environments, EAM provides the tools you need to make it easier to meet NIST 800-171 aligned access control requirements.

Why manufacturers choose Imprivata's EAM solution

- Authentication and access controls for CMMC 2.0 compliance
- Fast, frictionless logins for frontline workers and IT staff
- Offline access for air-gapped or intermittent networks
- Legacy app single sign-in (SSO) without custom development
- Audit-ready reporting and dashboards

EAM key capabilities

Reliable and easy to use MFA

- Secure two factor authentication that does not impede or slow workers down
- No extra devices such as smartphones or hardware tokens needed
- Designed for shared-use shift environments

SSO for both modern and legacy apps

- Provide SSO for SaaS-based apps, thick clients, and green-screen interfaces
- Enable seamless SSO without rewriting applications
- Reduce password fatigue while strengthening compliance

Access control for shared workstations

- Use existing proximity badges for tap-and-go login
- Prevent cross-user access with auto-lock and timeouts
- Tailored session policies for busy floors

Offline access support

- Keep users authenticated, even when internet access is lost
- Ideal for air-gapped or intermittently connected OT networks

Compliance alignment: CMMC 2.0

EAM helps make it easier to address key Access Control (AC), Audit and Accountability (AU), identification/authentication (IA), System and Communications Protect (SC) requirements:

Imprivata EAM for CMMC 2.0	
Access Control (AC)	Enforces authorized access controls, session locks, session termination, remote access, limits unsuccessful login attempts, and more.
Audit and Accountability (AU)	Provides user accountability and review of logged events.
Identification and Authentication (IA)	Enforces multifactor authentication (MFA), enforces password policy, stores and transmits only cryptographically protected passwords, blocks untrusted assets, and more.
System and Communications Protect (SC)	Prevents unauthorized information transfer via shared resources, employs secure engineering principles, ensures role separation, protects data in transit and at rest, employs FIPS-validated cryptography, and more.

Flexible deployment options

- **Get up and running quickly:** Benefit from our professional services for smooth and rapid deployment or our managed services for organizations that do not want to run and operate access management on their own
- **Keep what works:** Leverage your existing investments in badges and other hardware with lightweight agents for legacy environments

Trusted by leading manufacturers

We help manufacturers:

- Prepare with reporting
- Lock down systems to reduce risk of unauthorized access
- Simplify compliance across IT and OT systems

Let us help you make it easier to comply with CMMC 2.0

Ready to make CMMC 2.0 compliance easier without slowing down production? Talk to an expert.

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
