Badge tap plus face recognition for shared workstation access

Secure, frictionless access into shared Windows workstations

Imprivata Enterprise Access Management (EAM) enables access to shared Windows workstations through proximity badge tap combined with face authentication as a secondary factor. This "tap and smile" functionality provides a faster, more secure, and more convenient login experience for workflows that otherwise require both badge tapping and password entry, administrators can enable passwordless access, apply multifactor authentication (MFA) consistently, and mitigate risks associated with lost, stolen, or shared badges.

Benefits

- **Faster, passwordless workflows:** Eliminates routine password entry at shared workstations while preserving strong assurance with badge plus face

- **Consistent MFA enforcement:** Apply multifactor authentication across sites and user groups

- **Risk reduction:** Mitigates risks associated with lost, stolen, or shared badges by adding a person-bound factor

- **More time for productivity:** Clinical users and other frontline workers spend less time typing passwords and more time with patients

- **Enterprise scale impact:** Replacing passwords at shared workstations yields significant time savings and fewer helpdesk resets

At-a-glance benefits

Speed
Faster access; fewer password prompts

Security
Consistent MFA; reduced badge only risk

Efficiency
Enroll face once, use everywhere; minimal training

Scale
Designed for high volume shared workstation environments

The Imprivata advantage

The solution is optimized for high-throughput environments, works with masks and standard webcams, and ensures only the intended user gains access, even when multiple faces are present.

Administrators benefit from centralized enrollment and consent management, where users enroll once and can securely access any shared workstation without re-enrolling. Flexible policy controls enable IT teams to define authentication methods, grace periods, and fallback options for offline access, ensuring both security and operational continuity.

With built-in two-factor authentication and robust audit capabilities, Imprivata provides strong governance and compliance requirement visibility. Every authentication, enrollment, and exception is tracked for oversight and optimization, helping organizations enforce consistent MFA policies while maintaining a fast, frictionless experience for clinical users and other frontline workers.
