

DATASHEET

Enterprise Access Management

Fast and secure access for frontline and knowledge workers

Streamline and simplify system access

Imprivata Enterprise Access Management delivers single sign-on, fast user switching, multifactor authentication, analytics, application integrations, as well as virtual desktop and secure browser access. By improving manual, time-intensive login workflows, users can focus on doing their job instead of struggling with technology. IT departments can gain operational efficiencies with analytics and user self-service. Security and compliance teams improve security posture with strong authentication.

Increase user satisfaction, protect corporate data

EAM enables organizations to leverage the full benefits of their technology investments by building transparent, seamless, and convenient security into user workflows, backed by seamless integrations with IT systems and applications. By removing barriers that frustrate users and cause friction – like repetitive manual logins and having to remember long, complex passwords – EAM saves users valuable time and increases satisfaction. In summary, EAM:

- Streamlines user workflows by delivering No Click Access™ to on-premises, mobile, and cloud applications. With just a tap of their building access card, or detection of their face, or swipe of their fingerprint, users are instantly logged in to their personal device, shared desktop, or shared mobile device. Users are automatically signed into any profiled application – without having to type in their username or password.

- Enables multifactor authentication at technology endpoints to improve the security posture for the organization, without creating friction for the users
- Replaces passwords, improves security, and supports compliance requirements for frameworks like CJIS, CMMC, and NIST
- Enables fast, secure access into on-premises, legacy, mobile, or SaaS applications for all users from any device, anywhere
- Offers the industry's broadest native thin and zero client integration
- Saves users time and frustration by improving how they access applications and information

- Protects data and helps organizations meet compliance and cyber insurance requirements by preventing credential sharing, securing data on unattended workstations, and enabling easier and more thorough auditing and reporting of workstation and application access.
- Simplifies the ability to enforce multifactor authentication without placing a burden on the end user with the need to remember multiple, long, complex usernames and passwords.

Key features of Enterprise Access Management

SSO AND PASSWORD MANAGEMENT

By eliminating the need to repeatedly type usernames and passwords, users can save time and reduce frustration, and can ensure adherence to corporate cybersecurity policies. EAM supports a broad range of authentication methods and devices, including facial and fingerprint biometrics, and FIDO keys/badges that can instantly identify users for desktop access without disrupting their workflows or thought processes.

While EAM largely eliminates the need for passwords, if users forget their password, EAM self-service password management lets them quickly and easily reset it, reducing help desk calls, and improving overall productivity.

SECURE, FAST USER SWITCHING FOR SHARED WORKSTATIONS

Where shared workstations are implemented, user-specific logins can be time-consuming and frustrating. In the past, organizations have attempted to use generic Windows logins, but these and other workarounds expose various security and manageability issues. Instead, EAM enables secure, fast user switching between concurrent Windows desktops or kiosk workstations, reducing login times, all while protecting data.

SECURE WORKSPACE ACCESS TO VIRTUAL DESKTOPS AND SECURE BROWSERS

Imprivata EAM with Secure Workspace Access (SWA) access simplifies and expedites desktop access and application SSO for virtualized environments. These time savings, combined with the roaming capabilities of virtual desktops, deliver convenient mobility for users. EAM with SWA access provides API-level support for VMware, Citrix, and Microsoft RDS as well as for secure browsers like Island Browser. Imprivata also partners with leading thin and zero client hardware and device vendors, including IGEL, HP, and Teradici.

Embedding the Imprivata agent at the device level provides an unparalleled level of integration which gives users seamless access to their desktops, applications, and data, regardless of the technology environment.

CLOUD ACCESS VIA THE IMPRIVATA CLOUD IDENTITY PROVIDER

The Imprivata cloud identity provider (IDP) is a component of EAM that enables fast, secure access to SAML 2.0 web applications. This IDP allows users to access cloud applications from any device, and any location. The Imprivata cloud IDP also integrates with EAM badge-tap access to deliver near passwordless authentication into corporate devices, including shared workstations.

“The convenience and simplicity of swiping a badge for secure access is what sold the company on the Imprivata solution. It saves time and eliminates manual logins, increasing employee satisfaction and streaming workflows.”

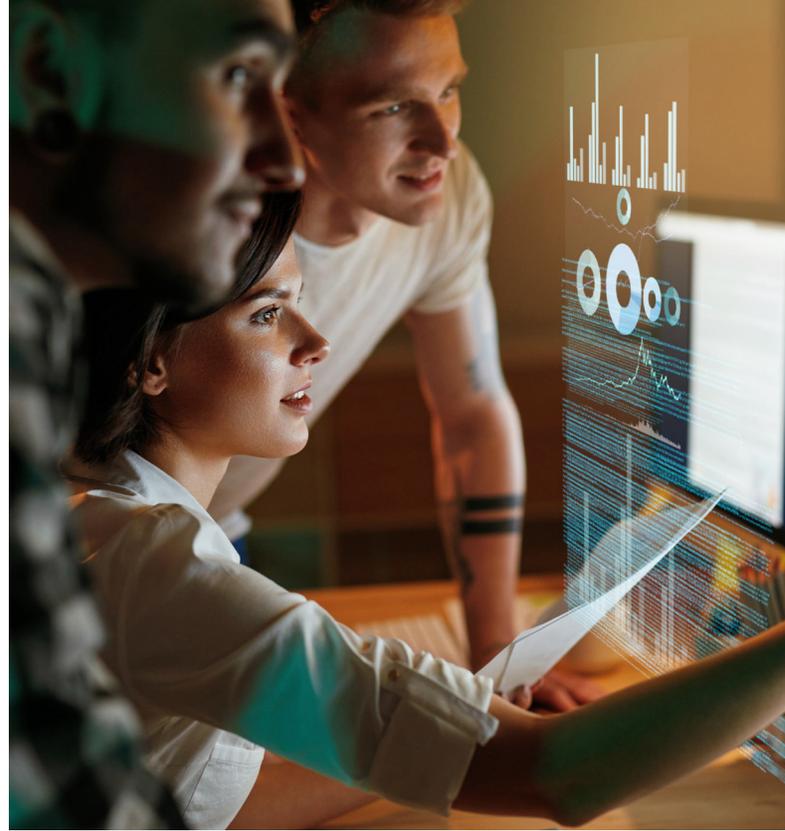

– Director of IT at U.S. manufacturer

APPLICATION PROFILING

It's easy to enable new applications for SSO and keep application profiles and EAM software up to date. The Imprivata application profile generator (APG) has an intuitive graphical user interface (GUI) that enables administrators to use "drag and drop" functionality to easily profile applications. Imprivata also makes regular updates to EAM, adding new capabilities, and seamlessly accommodating new releases from software vendors, virtualization, mobile and desktop partners, as well as from other technology vendors.

COMPLETE MONITORING AND SIMPLIFIED REPORTING

EAM provides out-of-the-box reports that give administrators full visibility into system and application access and enables rapid response to audit inquiries that would otherwise require IT professionals to perform manual, time-consuming examinations of multiple system or application logs.

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organizations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
