

Imprivata Mobile

Simple, secure access for shared mobile devices

As organizations rapidly expand their use of mobile devices to drive productivity, many discover their shared mobile strategies falling apart in practice.

Strategies that initially appear easy to implement expose a common set of challenges for the IT and security leaders responsible for building and maintaining these programs:

- **Inconsistent and insecure access controls** across shared mobile devices
- **Password fatigue and risky workarounds** that increase vulnerability to breaches
- **Limited visibility and accountability** over who accessed which device and when
- **Operational inefficiencies**, including device downtime, login delays, and high help desk volumes
- **Underutilized mobile investments** due to poor user experience and adoption

The result: increased risk, higher costs, and a mobile strategy that causes more friction than functionality.

Key benefits of Imprivata Mobile:

Eliminate password friction: Enable fast, passwordless authentication to reduce login time and eliminate risky password behaviors

Strengthen security across mobile environments: Protect against unauthorized access with multifactor authentication and device-level controls

Increase workforce productivity: Accelerate access to devices and applications, minimizing downtime and workflow disruption

Reduce IT burden and costs: Lower help desk volume, simplify access management, and maximize return on mobile investments

Improve visibility and accountability: Track device usage and authentication activities to strengthen compliance and operational oversight

The solution: Imprivata Mobile

Imprivata Mobile delivers frictionless, personalized, and secure shared mobile device access, enabling organizations to balance security, usability, and efficiency at scale.

Security and workflow efficiency without compromise

- **Passwordless multifactor authentication (MFA)** allows frontline workers to authenticate instantly using seamless authorization methods like badge tap and facial biometrics, simplifying access in any environment
- Leveraging **single sign-on (SSO) and password autofill** for mobile applications saves users time by removing manual steps, even on legacy apps
- **Badge-tap and facial authentication** assign devices in less than 2 seconds for fast, secure device checkout, with credentials automatically wiped between user sessions to prevent unauthorized access
- **Automated security controls** enforce device-level security by automatically locking devices between sessions and applying user-specific policies for application access
- **Asset management and visibility** ensure that IT and security teams know who had which device, where, and when, increasing accountability and significantly reducing loss

Transform shared mobile security and productivity with Imprivata Mobile

Imprivata Mobile enables organizations to improve security and operational efficiency by streamlining shared mobile device programs. With simple authentication workflows, login and access times are accelerated, minimizing workflow disruptions, enhancing overall user productivity, and reducing help desk tickets related to access issues. Improved visibility into device location, usage, and application activity reduces loss and strengthens accountability while lowering costs and simplifying audits.

With Imprivata, IT leaders maximize returns on their shared mobile investments, allowing them to confidently support a modern, passwordless strategy that balances security, usability, and efficiency across the organization.

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organizations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
