

# Imprivata Enterprise Access Management for EPCS with Advanced and Passwordless Access

Fast, compliant prescribing - plus stronger, lower-friction authentication across clinical workflows, SSO, and endpoint access

## A complete, healthcare-focused approach to secure prescribing and access

Imprivata Enterprise Access Management (EAM) for EPCS delivers the identity proofing, supervised enrollment, DEA-compliant two-factor authentication, workflow integration, and reporting needed for electronic prescribing of controlled substances.

Advanced and Passwordless Access (APA) extends that value by adding modern authentication choices - including face authentication, badge tap, mobile push, passkeys, PIN, and configurable grace periods - while reducing password friction and strengthening security.

Together, they form a broader access strategy instead of a point requirement: one platform for fast, secure prescribing and for strong authentication across other clinical workflows, single sign-on (SSO), and endpoint device access.

## AT-A-GLANCE BENEFITS

- Fast, compliant EPCS workflows
- Broader MFA choice with less clinician friction
- Passwordless options for shared and dedicated devices
- Support for SSO, applications, and endpoint access
- Lower reset-related helpdesk burden
- Stronger adaptive and risk-aware access controls

## Why these capabilities belong together

Customer need	EPCS value	APA value
Compliant prescribing	Identity proofing, supervised enrollment, logical access control, DEA-compliant signing workflows, and audit reporting.	Provides the authenticators and MFA experiences clinicians use to complete secure signing with less disruption.
Clinician efficiency	Integrates with leading EHR prescribing workflows and prompts only for methods that are available and allowed.	Adds fast options such as face authentication, badge tap, mobile push, passkeys, and configurable grace periods to reduce friction.
Security and resilience	Creates a secure, auditable chain of trust for EPCS and helps support federal and state requirements.	Extends strong MFA, passwordless access, self-service reset/unlock, adaptive access, and risk signaling across the environment.

## What customers gain from the combined solution

### For EPCS

- Complete platform for provider identity proofing, supervised enrollment, two-factor authentication, and reporting.
- Broad range of DEA-compliant authentication methods for prescribing workflows.
- Direct integration with leading EHR and e-prescribing applications for a consistent provider experience.

### For the broader access strategy

- Passwordless and adaptive authentication across shared workstations, dedicated devices, mobile devices, applications, and workflows.
- Support for strong, seamless authentication and MFA across clinical workflows, SSO, and endpoint device access.
- Self-service reset and authenticator management to reduce operational burden and improve continuity.

## Representative APA capabilities that strengthen EPCS and more

Capability area	Examples	Business impact
Passwordless and MFA choice	Face authentication, badge tap, mobile push, FIDO2 passkeys, PIN, and other strong factors.	Gives clinicians faster access while supporting stronger authentication requirements.
Self-service and continuity	Self-service password reset, unlock, and authenticator management.	Reduces helpdesk calls and helps keep users productive.
Adaptive and context-aware security	Risk-based access, risk signaling, and support for zero-trust assurance.	Improves protection against internal and external threats without applying the same friction to every workflow.

### Why Imprivata

Imprivata brings decades of healthcare access experience to help organizations simplify prescribing, strengthen identity assurance, and reduce workflow disruption. EPCS together with Advanced and Passwordless Access provides compliant e-prescribing plus a modern authentication foundation that can also extend to other clinical workflows, SSO, applications, and endpoint access.

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organizations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
