

DATASHEET

Simple, secure access anywhere

Imprivata Enterprise Access Management and Imprivata Mobile Access Management

Enable fast, frictionless
access across every device.

Organizations today are under constant pressure to balance security with usability. Users must navigate multiple logins across applications, shared devices introduce workflow inefficiencies, and IT teams face increasing demands to maintain security and compliance.

Imprivata Enterprise Access Management (EAM) and Mobile Access Management (MAM) provide a unified solution that enables fast, secure access across both shared workstations and mobile devices. By delivering consistent authentication and streamlined workflows, organizations can improve productivity, enhance security, and create a better user experience across the enterprise.

Streamline workflows, strengthen security

Imprivata delivers a unified access management platform that brings together enterprise and mobile access into a single, cohesive experience. With a shared identity and authentication framework, users can securely access the applications and devices they need – without unnecessary delays or complexity.

This approach not only simplifies access for end users but also provides IT and security teams with centralized control, visibility, and policy enforcement across all endpoints.

Imprivata Enterprise Access Management (EAM)

Imprivata Enterprise Access Management simplifies and secures access to applications, workflows, desktops, and virtual environments. By reducing reliance on passwords and enabling fast authentication methods, EAM helps organizations eliminate workflow bottlenecks while strengthening their security posture.

Users can access multiple applications through single sign-on, avoiding repeated logins and saving valuable time throughout the day. Authentication options such as badge tap and biometrics enable fast, passwordless access, which is particularly valuable in shared workstation environments where speed is critical. Built-in capabilities like self-service password reset (SSPR) reduce the burden on IT teams, while comprehensive audit trails support compliance and reporting requirements.

Key benefits include:

- Faster login times and improved workflow efficiency
- Increased user satisfaction and reduced frustration
- Stronger security through modern authentication methods
- Reduced help desk calls and operational overhead

Imprivata Mobile Access Management (MAM)

Imprivata Mobile Access Management extends secure, efficient access to shared mobile devices. It enables organizations to manage mobile fleets with greater visibility and control while delivering a seamless user experience.

With streamlined check-in and check-out workflows, users can quickly access mobile devices using familiar authentication methods such as badge tap or biometrics. Devices are automatically personalized for each session and de-personalized when returned, ensuring both usability and security. At the same time, IT teams gain real-time visibility into device location and usage, improving accountability and reducing loss.

Mobile SSO and autofill capabilities further simplify application access, eliminating the need for repeated logins and enabling faster task completion.

Key benefits include:

- Improved device accountability and reduced loss
- Greater adoption of shared mobile workflows
- Enhanced user experience with fast, intuitive access
- Simplified shared mobile device management and oversight

Better together: Unified access across desktop and mobile

When combined, EAM and MAM create a seamless access experience across the entire organization. A single authentication action, such as a badge tap, can enable a user to log into a workstation, access critical applications, and securely use a mobile device.

This unified approach reduces friction across workflows, minimizes time spent logging in, and ensures consistent security policies are applied across all devices. The result is a more efficient, secure, and user-friendly environment that supports modern workstyles.

Imprivata Enterprise Access Management and Imprivata Mobile Access Management enable organizations to transform how users access technology, making it faster, simpler, and more secure.
