

DATASHEET

Imprivata Privileged Access Management

Secure privileged credentials, enforce least privilege access, and monitor privileged activity across critical systems

Privileged access management is crucial to improving an organization's security posture and implementing an effective Zero Trust approach. Stolen or misused credentials associated with privileged and shared accounts, poor authentication, and/or lack of control over privileged access can lead to devastating security breaches – putting your business and most sensitive information at risk. In fact, reports show that more than 80% of data breaches involve compromised or otherwise abused privileged credentials.

A key component to addressing this security risk and securing your organization's most privileged users, credentials, and assets is privileged access management.

Meet your security initiatives with visibility and control over privileged credentials and provide least privilege access to your most critical assets and information – all without impacting productivity.

Imprivata Privileged Access Management is a comprehensive, easy-to-use solution that includes:

- An enterprise password vault to securely store credentials
- A robust job engine to rotate passwords and discover privileged accounts
- A session manager to broker and monitor access to-and-from privileged systems and records

Don't compromise on security or efficiency – take advantage of Imprivata Privileged Access Management's key features:

- **Zero Trust access to privileged accounts** – Limit the attack surface by providing least-privileged access, ensuring only authorized users have access to the privileged accounts they need, only when they need it
- **Comprehensive password vault and management** – Secure and streamline privileged password discovery, management, and rotation with automated workflows, and provide access to managed systems without disclosing credentials to end users
- **Enforced multifactor authentication** – Verify users are authorized with enforced multifactor authentication through Imprivata or other MFA solutions
- **Session management and recording** – Isolate, monitor, record, and audit privileged access sessions, commands, and actions in real time for total visibility into activity
- **Regulatory and cyber insurance requirements** – Satisfy compliance and security requirements like GDPR, NIST, ISO 27001, HIPAA, PCI, and SOX, and avoid failing audits with comprehensive session management and detailed audit trails
- **Experience a higher ROI and lower total cost of ownership** – Imprivata Privileged Access Management is a lightweight solution with a modern architecture that's agentless, with zero client and server footprint, enabling organizations to download and deploy the software in just minutes and easily manage on an ongoing basis

Extend your privileged access strategy

Imprivata Privileged Access Management is part of the Imprivata Privileged Access platform, enabling organizations to expand beyond traditional privileged access management as their identity security needs evolve. Manage all privileged identities and access with the convenience and efficiency of one streamlined platform:

- **Imprivata Vendor Privileged Access Management** for third-party remote access
 - **Imprivata Agentic Identity Management** to manage privileged access for agentic AI
 - **Imprivata Customer Privileged Access Management** for remote support
 - **Imprivata Identity Assurance and Threat Detection** to detect and respond to real-time privileged identity threats
- 

Easily add capabilities to your Imprivata Privileged Access platform as your security strategy evolves.
