

Imprivata Patient Privacy Intelligence for InterSystems TrakCare EPR

Monitor, prioritise, and investigate patient privacy risk across TrakCare environments

Imprivata Patient Privacy Intelligence (PPI) works with InterSystems TrakCare EPR to help NHS trusts and other healthcare organisations monitor access to protected health information (PHI), identify suspicious activity, and investigate potential privacy incidents with greater confidence. PPI brings TrakCare access activity together with broader user, patient, and workflow context to help privacy, compliance, and security teams focus on access activity that may require review.

With PPI monitoring your TrakCare environment, you can:

- Detect inappropriate and anomalous access to patient information
- Identify and prioritise higher-risk access activity with AI-driven analytics
- Reduce noise with risk scoring, intelligent filters, and explanation-based auditing
- Investigate faster with user, patient, role, department, and access context
- Support audit readiness, NHS information governance, and standardised privacy review processes with searchable audit trails and flexible reporting

TrakCare privacy monitoring

For organisations using TrakCare EPR, privacy monitoring needs to keep pace with high-volume access activity, varied user roles and access patterns, multi-site care environments, and evolving governance requirements, including GDPR and CAF-aligned DSPT readiness. PPI helps teams move beyond manually reviewing raw access logs by highlighting access activity that may require attention, helping teams focus their limited time and resources on the areas of greatest potential risk.

Monitor TrakCare access and identify high-risk activity before it escalates.

Learn more about how [Imprivata Patient Privacy Intelligence](#) helps detect inappropriate access.

Imprivata delivers simple and secure access management solutions for healthcare and other mission-critical industries to ensure every second of crucial work is both frictionless and secure. The Imprivata platform of innovative, interoperable access management and privileged access security solutions enables organisations to fully manage and secure all enterprise and third-party identities to facilitate seamless user access, protect against internal and external security threats, and reduce total cost of ownership.
