

DATASHEET

Imprivata Mobile solutions and Microsoft Intune

Connecting shared devices with your MDM for a seamless, secure mobile experience

Imprivata Mobile Access Management (MAM) and Imprivata Mobile Device Access (MDA), integrated with Microsoft Intune, deliver a powerful solution for managing shared mobile devices. This integration combines **secure access to devices** with **cloud-based endpoint management**, enabling organizations to improve IT efficiency while enhancing user workflows.

Simplified shared mobile device and access management

Imprivata Mobile solutions, combined with Microsoft Intune, enable IT teams to securely manage shared mobile devices while maintaining strong access controls, streamlined workflows, and compliance.

These integrations enable IT teams to support shared-use mobile devices with:

- Remote automated provisioning for faster, scalable deployment
- Routine device maintenance with device updates via USB during charging to reduce downtime
- Customizable workflows including deleting devices, syncing devices, clearing passcodes between users, and lost mode – to easily manage devices based on your organization's needs
- Location and asset information including who checked out a device last, when it was checked out, and what applications are being used

Stronger security without added IT burden

With support for passwordless authentication methods such as badge tap, biometrics, and multifactor authentication, organizations can help strengthen controls designed to restrict access to authorized users on shared mobile devices. Imprivata Mobile solutions are designed to support secure access workflows while reducing many of the common friction points associated with traditional login processes.

Imprivata Mobile solutions and Microsoft Intune: Simple, secure, shared mobile performance

Imprivata Mobile solutions integrated with Microsoft Intune are designed to help organizations scale shared mobile device environments while balancing security requirements and user productivity. By combining streamlined device management with fast, frictionless authentication, IT teams can reduce complexity while users gain reliable, immediate access to the devices and applications they need. The result is a secure, efficient shared mobile environment that supports both operational performance and high-quality user experience.
