

DATASHEET

Secure and Simple Clinical Printing

Clinical staff badge into workstations, applications, and shared devices. Now they can badge into printing.

Clinical staff badge in and out of shared workstations hundreds of times a day, relying on Imprivata Enterprise Access Management (EAM) to authenticate their identity across every system they touch, except printing.

In shared clinical environments, print jobs are typically assigned to the Windows session, or generic kiosk login, not the end user. When a nurse walks to the printer to pick up patient discharge papers or a medication label, there's often nothing to release. The printer has no way to match the job to the right user, which could lead to sensitive patient information left unattended on the printer tray, repetitive IT tickets, and unacceptable delays in patient care.

Protect patient data and ensure print jobs are always tied to user identity

Vasion now integrates with Imprivata EAM to close the identity gap. Badge authorization extends from the workstation to the printer automatically, so clinical staff can release documents anywhere with the same badge they already carry. IT can securely manage all print from a single console without additional hardware in environments where badge readers are already deployed.

Vasion plugs directly into the Microsoft Active Directory and Imprivata Identity and Access Management infrastructure you already have, so no rip-and-replace, just print infrastructure that is secure and works seamlessly with your environment.

Benefits

- **Follow Me printing allows users to pick up jobs at any printer.** Ensure PHI is protected and print jobs are never left on the tray with Secure Release.
- **HIPAA-ready audit logs** capture every badge authentication event at the printer, including successful and failed attempts, providing visibility for IT and compliance teams.
- **Maximize your Imprivata investment.** Vasion plugs directly into the security infrastructure you already have to easily extend identity to print. No rip-and-replace required.
- **Clinical staff badge at the workstation and badge at the printer.** Reduce attack surface, minimize security risk, and meet healthcare compliance standards.

Vasion PrinterLogic

Eliminate print servers and print-related help desk tickets, while easily managing all clinical printing with the Vasion Platform. PrinterLogic helps organizations manage user-generated printing and system-generated documents and labels from EMRs/EHRs in the same platform. The Advanced Security Add-on offers badge-based secure release, Off-Network printing, and HIPAA-compliant audit logging across any printer fleet. Consolidate printing operations and management across any print workflow, device, operating system, or location—without additional infrastructure requirements.

How Vasion and Imprivata Work Together

Badge identity historically breaks down with print and exposes a potential attack surface. With the Imprivata integration, Vasion extends seamless, secure authorization into shared clinical workstation environments, where Imprivata manages staff identity and Vasion extends that identity into secure print workflows.

When a clinician badges into a shared workstation, Vasion detects the active Imprivata session and retrieves their identity from Imprivata. That identity tags every print job the user submits. At any printer, a single badge tap surfaces only their jobs for immediate secure release. The integration handles both shared kiosk and individually-assigned Imprivata workstations automatically, no separate configuration required per workstation type.

About Vasion

Vasion is the cloud-native, intelligent print automation solution eliminating print servers, consolidating environments, and automating document workflows. With FedRAMP High Authorization, SOC 2 Type II, SOC 3, and ISO 27001 certifications, PrinterLogic and Vasion Automate help IT leaders in healthcare organizations modernize and secure all print, unlock AI-ready environments, and accelerate digital transformation. Visit vasion.com/integrations/imprivata to learn more.

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
