

Top reasons why identity governance matters

for Chief Information Security Officers

“When employees are added to our HR system, they’re assigned a role through Imprivata Identity Governance where each role has been mapped to their job code. The solution enables us to automatically grant users access to applications and systems associated with each role.”

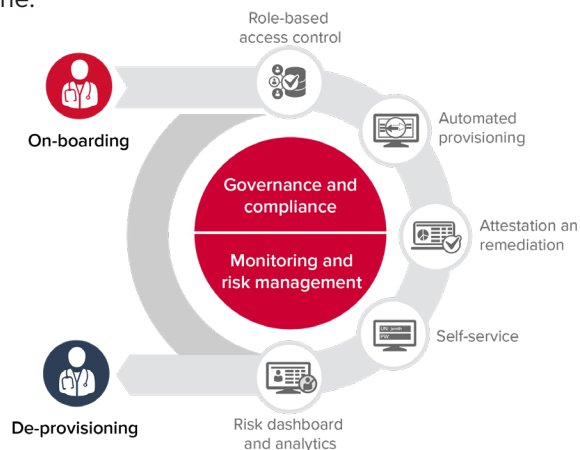

- Leah Dorman,
Info Systems Security Analyst,
Northern Light

If identity and access management (IAM) is not top of mind for today’s healthcare CISOs, it should be. Many organizations rely on manual processes to onboard users and manage entitlements – an ineffective approach that introduces security vulnerabilities and adds risk. Hackers can target orphaned accounts and gain access to clinical applications and IT systems to steal PHI or wreak havoc.

Security attacks can disrupt patient care and lead to lawsuits and financial loss. Industry analysts say the average total cost of a data breach exceeds \$2 million per hospital¹. CISOs strive to improve security systems and practices to avoid legal actions and prevent costly cyberattacks, and IAM is a foundational element of reducing risk.

Your solution: Imprivata Identity Governance

Imprivata Identity Governance is the leading identity governance and compliance management solution in healthcare, providing fast, secure role-based access to IT systems and applications. The solution automates identity and risk management processes, enables compliance with internal and regulatory guidelines, and allows clinicians to focus on quality patient care on day one.

Identity governance provides unique benefits for each healthcare technology leader.

Proven benefits

Imprivata Identity Governance can help your organization:

- Reduce vulnerabilities by tightly aligning access rights with user roles throughout the entire user lifecycle – from day one to separation
- Strengthen security posture by proactively analyzing risk, identifying mismatched entitlements, eliminating orphaned accounts, and preventing PHI theft
- Improve compliance with internal policies and government regulations with comprehensive analysis, reporting, and auditing
- Lower risk of PHI exposure by ensuring users only have access to the information and applications they need to do their jobs
- Enhance security with single vendor – tight integration with Imprivata OneSign® and Imprivata Confirm ID® – healthcare’s leading single sign-on and authentication platform

Next steps

Seeing is believing. Let Imprivata demonstrate the proven benefits of Imprivata Identity Governance. See how automating identity and access management processes can help your organization reduce security vulnerabilities and mitigate risk.
