

Imprivata Confirm ID for Cerner Millennium

Fast, convenient authentication for electronic prescribing of controlled substances and other workflows in Cerner Millennium

Key benefits:

- Seamless integration with Cerner Millennium delivers consistent authentication experience across clinical workflows
- Optimize Cerner Millennium workflows by removing barriers to adoption with innovative, convenient, and DEA-compliant authentication methods
- Improve clinical efficiency by enabling fast, secure authentication for clinical workflows

Imprivata Confirm ID™ is a comprehensive identity and multifactor authentication platform that integrates seamlessly with Cerner Millennium to enable fast, secure, and consistent user authentication across clinical workflows.

Delivering safe, effective, and compliant patient care often requires providers to authenticate clinical transactions such as electronic prescribing of controlled substances (EPCS), medication administration, witness signing, and blood administration, among others. However, adding a layer of security introduces potential inefficiencies that can frustrate providers and impede patient care.

Imprivata Confirm ID transforms these clinical workflows by replacing manual password entry with fast, automated authentication. Imprivata Confirm ID helps organizations optimize their investment in Cerner Millennium by driving user adoption and improving workflow efficiency.

Comprehensive solution for EPCS

Imprivata Confirm ID is an end-to-end solution for meeting the DEA requirements for EPCS, including provider identity proofing, supervised enrollment of credentials, two-factor authentication, and auditing and reporting. Imprivata Confirm ID offers tight integration with Cerner Millennium and supports the most comprehensive set of innovative, convenient, and DEA-compliant two-factor authentication methods to give providers a fast and efficient EPCS workflow.

By giving providers a single, efficient, and consistent e-prescribing workflow for all medications, Imprivata Confirm ID drives EPCS adoption to meet Meaningful Use criteria and helps organizations realize the substantial benefits of EPCS, including increased provider productivity and improved patient safety and satisfaction.

Imprivata Confirm ID enables fast, secure authentication for other workflows within Cerner Millennium by replacing manual logins with more convenient authentication methods.

Fast, secure authentication for multiple clinical workflows

In addition to EPCS, Imprivata Confirm ID enables fast, secure authentication for other workflows within Cerner Millennium by replacing manual logins with more convenient authentication methods. This gives providers a consistent, seamless authentication workflow while creating a robust audit trail for all transactions with patient health information. Supported workflows within Cerner Millennium include:

- **Medication ordering** – Imprivata Confirm ID improves the drug ordering process within Cerner Millennium by replacing manual passwords for authentication with faster, more efficient methods. This allows providers to realize the accuracy and efficiency benefits of electronic medication ordering without the inconvenience of the password requirement. Enabling an automated authentication also creates a more complete audit trail to meet compliance requirements.
- **Medication administration record** – With Imprivata Confirm ID, nurses and other care providers can quickly and efficiently authenticate to witness the administration of high-risk medications to patients. Instead of manually entering their username and password – which takes time, breaks concentration, and potentially impedes care delivery – providers can simply tap a badge or swipe a fingerprint. This ensures witnessing policies are met while maintaining clinical workflow efficiency.
- **Pharmacy dispensing** – Imprivata Confirm ID gives providers a fast, efficient method for authenticating to dispense medication. Using the same convenient authentication methods for ordering medication, providers can complete the dispensing process, creating a closed-loop system that helps improve auditing of dispensing activity. Enabling authentication with a proximity badge or fingerprint also eliminates workarounds such as shared or generic passwords, delivering better visibility into which provider completed the medication dispensing.

Fastest, most convenient authentication solutions

Imprivata Confirm ID offers the broadest range of convenient, innovative, and DEA-compliant authentication options to best meet various clinical workflow requirements. Providers are only prompted for authentication methods that are available and allowed, which streamlines signing and improves efficiency.

Supported authentication options include:

Workflow	Supported authentication methods						
	Hands Free Authentication	Push token	Fingerprint	Soft token	Hard token	Badge	Password
EPCS	 ✓	 ✓	 ✓	 ✓	 ✓	 ✓	 ✓
Clinical workflows	✓	✓	✓	✓	✓	✓	✓

Comprehensive auditing and reporting

Imprivata Confirm ID offers detailed reporting capabilities to establish a secure, auditable chain of trust for EPCS and other clinical authentication workflows. Imprivata Confirm ID gives organizations better visibility into how, when, and where providers interact with patient health information to safeguard PHI and meet regulatory compliance requirements. Comprehensive reporting tools document the credential enrollment process and user authentication, storing the data in a centralized location for simplified compliance reporting.

Imprivata Confirm ID: The comprehensive identity and multifactor authentication platform for healthcare

Imprivata Confirm ID is a comprehensive identity and multifactor authentication platform for fast, secure authentication workflows across the healthcare enterprise. Imprivata Confirm ID makes security invisible by offering a broad range of innovative, convenient, and DEA-compliant authentication methods, including Hands Free Authentication, push token notification, and fingerprint biometrics. Imprivata Confirm ID combines security and convenience by enabling fast, secure authentication across enterprise workflows while creating a secure, auditable chain of trust wherever, whenever, and however users interact with patient records and other sensitive data.
