

Imprivata Cortext with VMware Workspace ONE

Secure messaging with mobile device management

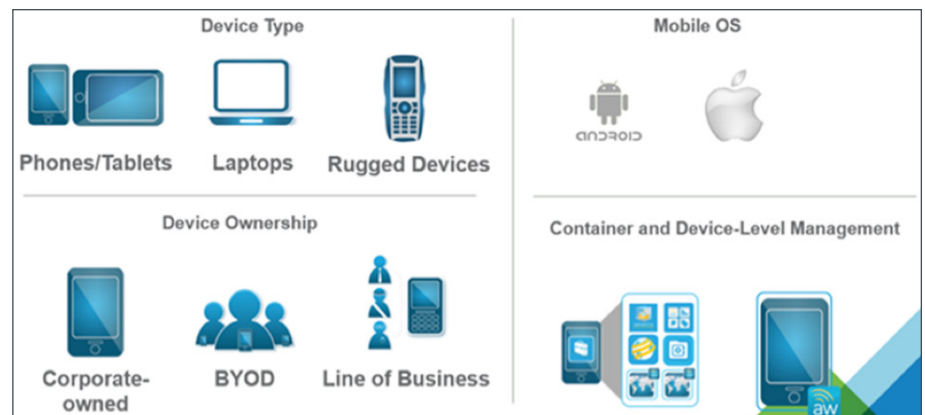

- Enable device choice for employees
- Ensure employee privacy is protected
- Separate corporate and personal data
- Provide consistent experience across platforms
- Manage only corporate data on the device

Imprivata Cortext® is the secure communications platform for healthcare that facilitates care coordination by allowing physicians, nurses, and patients to connect, communicate, and collaborate securely from any workstation or mobile device. Imprivata Cortext enables healthcare organizations to replace ineffective communication, improve care coordination, and secure patient health information.

VMware Workspace ONE®, powered by AirWatch unified endpoint management technology, is a digital platform that simplifies and secures app access and IT management of the modern workforce. Workspace ONE provides complete separation of corporate and personal data and devices, securing corporate resources and maintaining employee privacy. The solution gives full visibility and manages all endpoints – including BYOD, corporate-owned, and line of business ownership – from a single admin console.

Workspace ONE integration allows hospitals to implement Imprivata Cortext in their own enterprise environment, quickly configure and update devices, and provide central controls for IT teams to deploy and securely manage Imprivata Cortext across the enterprise.

Highly scalable solution: Workspace ONE is designed to provide a seamless user experience for accessing any app on any device and allows for the secure delivery and management of apps at scale, on any device. With its open ecosystem, Workspace ONE support every app, now and in the future.

Bring your own device (BYOD) program support: Increase productivity by allowing employees to complete work tasks from their personal device. Secure corporate data while maintaining privacy for employees and their personal information with Workspace ONE. Built-in privacy app educates users about how work data separation increases BYOD program adoption.

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.

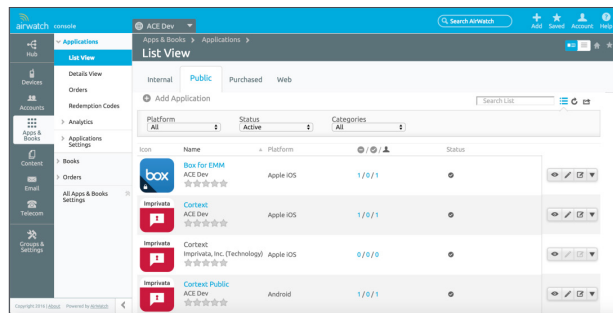

Flexible enrollment options: Simplify device enrollment for end users with flexible enrollment options or enable administrators to enroll devices.

Application management: Deliver, secure, and manage business apps with Workspace ONE Mobile Application Management. Provide a personalized app catalog specific to the user. Enable apps with enterprise-grade security and configurations while separating corporate data.

Integration feature description

The integration of Imprivata Cortext into the AirWatch Container allows IT organizations to provide:

Mobile app delivery, security, and management of Imprivata Cortext: VMware Workspace ONE allows secure delivery of the Imprivata Cortext app to mobile devices across the enterprise based on profile. With a single sign-on (SSO) experience, Workspace ONE allows for push-based, instant delivery of the Imprivata Cortext app to users' mobile devices.

Override the Imprivata Cortext PIN lock: When in a Workspace ONE managed environment on the device, the Workspace ONE forced PIN lock takes precedence. In hybrid implementations where most users are managed with Workspace ONE but there are some that are not, the Imprivata Cortext PIN lock enforcement presides for the non-Workspace ONE managed devices.
