

Imprivata Identity Governance for Epic

“Imprivata Identity Governance has helped us streamline and automate our access privilege audits with periodic access reviews, enabling managers to quickly and easily complete the validation of access of all personnel reporting to them.”

- Ana Agostini, Director of IT Services, Memorial Healthcare System

Benefits

- Increase speed of provisioning within Epic
- Improve Epic identity administration
- Reduce IT costs and support
- Meet IT governance requirements

Manually administering user accounts for Epic systems is a complex and error-prone process. As a result, health systems and hospitals often experience delays in provisioning clinicians into the Epic environment.

Healthcare organizations also face the challenges of managing user identity and access lifecycles, since clinicians change departments, get new degrees, or get promoted. Epic administrators need the ability to react quickly to minimize downtime for clinicians, update their privilege access, and deactivate those who leave the organization.

With Imprivata Identity Governance, an end-to-end solution with precise role-based access controls, automated provisioning and de-provisioning, and streamlined auditing processes, Epic customers can automate the provisioning process and ensure accurate and efficient role lifecycle management. Imprivata Identity Governance:

- Reduces IT costs by replacing burdensome, slow, and error-prone manual administering of user accounts while ensuring a high standard of security through efficient identity creation and termination
- Strengthens data security by streamlining auditing processes and providing compliance teams with rights and usage data in a single, comprehensive report
- Empowers care providers to deliver high-quality care while increasing their productivity by ensuring correct, timely access

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.

Flexible creation and linkage of EMP and SER records

Because Epic organizations set their own policies for entering and linking EMP (user) and SER (provider) records, Imprivata provides the flexibility to accommodate them – whether they use the automated process or opt to develop them manually:

- Creation and linking of both an EMP and SER record
- Creation of either an EMP or SER record
- Creation of either an EMP or SER record and initiation of a link to the other record

Proven experience with Epic health systems

For more than 10 years, Imprivata Identity Governance has been successfully automating provisioning process at Epic health systems. Due to that experience, Imprivata has standardized the provisioning approach so that Epic health systems are able to achieve faster ROI – often within weeks.
