

Imprivata Medical Device Access

Fast, secure access to Philips IntelliVue Guardian Solution

Key benefits:

- Provide clinical efficiency and provider satisfaction
- Increase visibility into user interactions with PHI
- Improve security on medical devices

Interconnected medical devices are valuable resources in the delivery of patient care, enabling data to be captured, aggregated, transmitted, and analyzed in real time. However, with these advanced capabilities come new security threats, as each device represents a potential point of exposure of patient information.

The FDA and other government agencies are advising medical device manufacturers and health systems to take steps to ensure that medical devices are protected against potential cyber threats. In doing so, it's crucial to make sure that additional security measures do not impede clinical efficiency or provider satisfaction.

Imprivata Medical Device Access now integrates with the Philips IntelliVue Solution to support authentication on the Philips IntelliVue MP5SC and Philips IntelliVue XG50 patient monitors, enabling fast, secure authentication for clinical users accessing these devices. With Imprivata Medical Device Access, healthcare organizations can ensure the security and integrity of the data stored on and transmitted through these medical devices without impeding clinical workflows.

Balancing security and convenience

Healthcare organizations are now able to implement and enforce security measures without affecting provider satisfaction or productivity. With Imprivata Medical Device Access integrated directly into selected Philips IntelliVue patient monitors, organizations can streamline authentication workflows and make secure authentication practical by empowering clinicians to lock and unlock access to these devices with a simple badge tap.

The integration also enables visibility into how, when, and where clinicians access and interact with patient health information on medical devices.

Feature benefits

User authentication through proximity card

Imprivata Medical Device Access provides strong authentication via proximity badge tap to replace the need for manual entry of usernames and passwords when accessing medical devices.

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.
